

FULL FEATURED HOSTED PHONE SYSTEM

SIPsys has developed a flexible and full featured phone system that streamlines the way businesses communicate and delivers a stable high-quality solution at low cost.

Features include...

- Flexible call routing
- Direct Dial In (DDI)
- Hunt Groups
- Operator Display
- Out-of-hours messaging
- Voicemail
- Call Forwarding
- Multi-level Interactive Call Management
- Web Based Management and Reporting...

Our solution utilises Internet connectivity to deliver a quality phone service without the need for Client Premises Equipment other than phones.

Because the solution is hosted off-site in a secure and fully managed environment, we can ensure high availability and rapid response to any problems. The hosted system is monitored and managed by a team of experts 24/7.

As the system is hosted, any IP phone, once configured, simply needs an Internet connection to become part of the exchange. Thus, remote working, multiple offices, office moves are easily accomplished. Any phone call between the remote systems is free and calls can be forwarded/routed between extensions as necessary.

Our solution provides enterprises with a broad range of features, as well as dramatically reducing both PBX implementation costs and phone bills through the use of VoIP calling. This is fully scalable as you grow.
